

Caring for Your Magnetic Vehicle Signs

ALWAYS Keep the Surfaces Between You Magnet and Vehicle Clean and Dry

When condensation or any moisture builds up between the magnet and your vehicle it can create a powerful bond. When this occurs, the magnet becomes almost impossible to remove in one piece. In addition, any dirt or particulates between the magnet and the vehicle become highly abrasive. Repositioning the magnet by pulling or sliding can scratch or damage paint. We recommend cleaning at least once a week.

Make Sure the Magnet Lies Perfectly Flat on the Vehicle

Vehicle contours and trim can prevent a magnet from lying perfect flat against the surface of the vehicle. When installing, make sure magnet is perfectly flush with the vehicle. **If they don't lie flat, wind can catch under the magnet flipping it off the vehicle creating a dangerous road hazard and liability.**

Use Care When Removing Magnetic Signs From Vehicle

Lift a corner and peel magnet carefully from the vehicle surface. Extreme temperature can change the qualities of the magnet making it either brittle or highly pliable. Use care as these conditions make it easy to tear or break the magnet. Sliding or repositioning the magnet on an unclean surface may cause scratches or abrasion if there is dirt or particulates under the magnet.

Store Unused Magnets in a Clean, Flat Place

Avoid extreme temperatures. If magnets need to be rolled for longer term storage, roll around a cardboard tube. Before use, unroll and store flat at room temperature until magnets return to a flat shape.

Remove Magnetic Signs Before Driving at High Speeds

Magnetic vehicle signs have been known to fly off vehicles traveling at high speeds. If the magnet is not securely attached to the vehicle at all edges, wind can catch under the magnet, essentially turning it into a sail. This creates a risk of serious liability and hazard on the road.

Remove Magnetic Signs Before Automatic Car Wash

Car wash brushes can damage the magnet or slide it against the vehicle surface causing abrasion or scratching of paint.
